Project

1.SMART HOME:

Description: A smart home is a modern house equipped with advanced technologies that automate and simplify daily activities. These technologies can be controlled remotely through a smartphone or voice commands, making it easier for homeowners to manage and monitor their homes from anywhere. Our project is about automation of fans and lights using phone and turning off the heater automatically after reaching the certain temperature

2. SMART GYM:

Description: A smart gym is a fitness facility equipped with advanced technology that enhances the workout experience and helps gym-goers achieve their fitness goals. Smart gym technology can include interactive fitness equipment, wearable devices, and mobile apps that track workout progress and provide personalized training programs. Going to Gym isn't the way to get in a great workout, where gym provides a dedicated space. Including Games in the workplace makes attracts peoples attention, and make the work more interesting and easy.

3. ONLINE EXAMINATION SYSTEM:

Description: I'm developing an online examination system using html,css,javascript and php. the system allow for the creation and administration of exams, as well as the ability for users to take the exam and receive their scores. the system also includes features such as question bank, user management, with time limit and reporting capabilities.
